

ABSTRACT

Event management is a strong and fast growing profession with a rather low level of standardization. Often we take event management as a part of project management, but we have to consider that event management has very specific concepts and issues, and needs further developed methods and tools. We classify events, we compare project management and event management, we reconsider standards in both areas, and discuss perspectives for a stronger standardization of event management in the future. It is a static web page . This webpage will Mainly focus on birthday party, marriage functions and social events. The application will be Developed using Html and Back end will be managed in Excel sheets. Application will have easy and feasible GUI for all type Of users . This application will assist him/her in planning a successful and fun events.The online event management system is a project which aims in Developing computerized system to maintain all the daily events with of cost . This project has Many features which are generally not available in any events websites .it is a online platform to do Events with communication. It has a facility to call the event managers and book the events slot Where ever you were .

INTRODUCTION

INTRODUCTION

Events play an important role in our society. Any Happening or an activity can be referred as an event. Individuals often find they lack the expertise and time to Plan events themselves. Independent planners are needed To step in and give these special events the attention they Deserve. In the current scenario, planning an event Requires a lot of patience and hustle bustle right from Deciding the theme to deciding venue and events. Lots of Factors need to be considered while making each decision. Also once the party is planned lot of on the day issues Such as maintaining low noise levels after a particular Time, or neighbors complaining about the noise levels etc Take the fun out of the party/event. In order to manage Such issues we require an easy to use app that will help in Effectively tracking such problems. In this research work, We are going to make use of the aforementioned smart Phone through which the event management is made Feasible with

LITERATURE SURVEY

We have referred the following papers and apps for our Project:

[1] AE Organizer app reviewed the literature on Professional associations and explored the strategic Direction of event management committee.

[2] Event Planner app proposed an innovative approach for Specifying events based on that to predicate that an event Hustle bustle right from deciding the theme to deciding The venue and events.

[3] Sandeep Misal¹, Segar Jadhav² , Tushar Jore³ , Archana Ugale⁴ in this paper it review Review on College Event Organizer to reduce the overhead of the Organizing committee and Accuracy in workOrganizing All event in a better way .

SYSTEM ANALYSIS

SYSTEM ANALYSIS

Definition of the problem:

- To create or develop a new system ,first we have to study the prior system ,analyse difficulties faced by the operator of the system , system analysis therefore understand such problems and proposes a new system which rectifies a problem that the existing system consists

Existing system :

- The main problem of the people face during event booking. They used to think so because the cost imposed by them by the carriers who they hire for event managing

Proposed system :

- To solve the problems in existing system the event managing system take into the action .it works according to the customer requirements and we provide them a desirable results . The online event planning and booking makes the best event with reasonable costs.

Users of the system:

- the clients of the system are administrator clients this system is designed in such a way the user can easily interact with the system with a minimum knowledge to browse the net and system guidelines

SYSTEM STUDY

SYSTEM STUDY

Feasibility study :

➤ it is necessary and prudent to evaluate the feasibility of a project at the earliest possible time. There are many different ways of checking whether a system is feasible or not the following feasibility studies were performed to gauge the feasibility of the system.

Techenical feasibility:

➤ this test includes a study of function performance and constraints that may affect the ability of the system . The test begins with the assessment of the technical variability of proposed system .one of the main features to be accessed is the need of various kind of resources for the successful implementation for the proposed system .

Operational feasibility:

➤ In this test the operational scope of the system is checked . The system under consideration should have enough operational reach .It is observed that the proposed system is very user friendly and since the system was built with enough help , even persons with little knowledge of windows can find the system very easy.

Economical feasibility:

➤An evaluation of development cost weighed against the Ultimate income or benefit derived from the development of the proposed system is made . Care must be taken that incurred in the development of proposed of the system should not exceed from the system .the income Can be in the terms of money or good will since the software begins in both ,the system is highly variable.

SYSTEM
REQUIREMENTS &
SPECIFICATIONS

System requirements specifications

Hardware and software specification:

The development of the project deals with following environment

- **Hardware requirements**
- **Software requirements**

Hardware requirements:

- **Premium processor - 233MHZ or above**
- **Ram capacity – 128 MB**
- **Hard disk – 20 gb**
- **CD rom drive – 32HZ**
- **Keyboard - 108 standard**

SOFTWARE REQUIREMENTS:

❖ One of the most difficult task is that the selection of the software once system requirement is known is determining whether a particular software package of fits the requirement .After initial selection further security is needed to determine the desirability of particular software compared with other candidates .This selection first summarizes the requirements questions and then suggest more detailed comparison

- Operating system - windows 10
- Browser - chrome
- Database - forms
- Tool - notepad

DESIGN ENVIRONMENT

HTML

To publish information for global distribution one needs a universal understood language ,a kind of publishing mother tongue that all computers potentially understand .the publishing language used by world wide web in html (hyper text markup language).html gives authors that means to publish online ne documents with headings ,texts,tables,lists,photos,videos etc.,Retrive online information via hypertext links At the click of button design forms for conducting transactions with remote services for use in searching of information , events booking etc.,.include spread – sheets video clips ,sound clips , and other application directly in their documents.

A breif history of html:

The HyperText Markup Language or HTML is the standard markup language for documents designed to be displayed in a web browser. It can be assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript.

Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages. HTML describes the structure of a web page semantically and originally included cues for the appearance of the document.

History:

In 1980, physicist Tim Berners-Lee, a contractor at CERN, proposed and prototyped ENQUIRE, a system for CERN researchers to use and share

documents. In 1989, Berners-Lee wrote a memo proposing an Internet-based hypertext system.[3] Berners-Lee specified HTML and wrote the browser and server software in late 1990. That year, Berners-Lee and CERN data systems engineer Robert Cailliau collaborated on a joint request for funding, but the project was not formally adopted by CERN. In his personal notes[4] from 1990 he listed[5] “some of the many areas in which hypertext is used” and put an encyclopedia first.

The first publicly available description of HTML was a document called “HTML Tags”, first mentioned on the Internet by Tim Berners-Lee in late 1991.[6][7] It describes 18 elements comprising the initial, relatively simple design of HTML. Except for the hyperlink tag, these were strongly influenced by SGMLguid, an in-house Standard Generalized Markup Language (SGML)-based documentation format at CERN. Eleven of these elements still exist in HTML 4.[8]

HTML is a markup language that web browsers use to interpret and compose text, images, and other material into visual or audible web pages. Default characteristics for every item of HTML markup are defined in the browser, and these characteristics can be altered or enhanced by the web page designer’s additional use of CSS. Many of the text elements are found in the 1988 ISO technical report TR 9537 Techniques for using SGML, which in turn covers the features of early text formatting languages such as that used by the RUNOFF command developed in the early 1960s for the CTSS (Compatible Time-Sharing System) operating system: these formatting commands were derived from the commands used by typesetters to manually format documents. However, the SGML concept of generalized markup is based on elements (nested annotated ranges with attributes) rather

than merely print effects, with also the separation of structure and markup; HTML has been progressively moved in this direction with CSS.

HTML versions timeline

HTML 2

November 24, 1995

HTML 3

January 14, 1997

HTML 4

December 18, 1997

April 24, 1998

HTML 4.0[20] was reissued with minor edits without incrementing the version number.

December 24, 1999

HTML 4.01[21] was published as a W3C Recommendation. It offers the same three variations as HTML 4.0 and its last errata were published on May 12, 2001.

May 2000

ISO/IEC 15445:2000[22][23] (“ISO HTML”, based on HTML 4.01 Strict) was published as an ISO/IEC international standard

The HTML Living Standard, which is developed by WHATWG, is the official version, while W3C HTML5 is no longer separate from WHATWG

HTML Table:

various ways to implement it, & will also understand its usage through the examples. HTML Table is an arrangement of data in rows and columns, or possibly in a more complex structure. Tables are widely used in communication, research, and data analysis. Tables are useful for various tasks such as presenting text information and numerical data. It can be used to compare two or more items in the tabular form layout. Tables are used to create databases.

Scripting:

Through scripts authors may create smart forms that react at user fill them out scripting allows designers to create dynamic web page and use html as means to build network applications .the mechanism provided to associate html with scripts are independent of particular scripting langauge .

Printing:

Sometimes,authour will want to make it easy users to print more than Just the current document .when documents from part of longer work the relationship between them can described using the html link emements are using W3C's **description langauge**

USER MANUAL

USER MANUAL

- **On entering into the event management website the user encounters the main page**

Consisting of following modeules:

- ❖ **Home**
- ❖ **Gallery**
- ❖ **About us**
- ❖ **Contact us**
- ❖ **Feedback**

- **The user can be passenger by following steps**
- **On clicking home at any stage the user can come back to the home page**
- **On click on the home page the user knows what about the event managing system is directed to a page containing**

Home page

- **After completing the fields and clicking the user directed to the page containing information about the project**

Main page

- On clicking on the main page you will able to see the page consisting of home, gallery, about us, contact us, feedback .

Home

- On clicking on the home page link the user directed to the home page consisting of information about the event management system

Gallery

- On clicking on the gallery link the is directed to the gallery page consisting of photos videos etc.,of the events

About us

- On clicking the about us link the user directed to the about us page Consisting of information about the providers and customer usage

Contact us

- On clicking the contact us link the user is directed to the contact us page containing mobile numbers of our customer executive team
The team managing our events and book the slots where ever and when ever the event

- They makes our events successful

Feedback

- The information given by the customers are very useful for improving ours as the best

The data is stored in our data base and improving ourselves as your wish

MODULE

DESCRIPTION

Module description

The proposed system is developed by using five modules :

1. **Home**
2. **Gallery**
3. **About us**
4. **Contact us**
5. **Feedback**

Home

➤ On clicking on the home page link the user directed to the home page consisting of information

About the event management system

Gallery

➤ On clicking on the gallery link the is directed to the gallery page consisting of photos videos

Etc.,of the events

About us

- On clicking the about us link the user directed to the about us page Consisting of information

About the providers and customer usage

Contact us

- On clicking the contact us link the user is directed to the contact us page containing mobile

Numbers of our customer executive team

The team managing our events and book the slots where ever and when ever the event

- They makes our events successful

Feedback

- The information given by the customers are very useful for improving ours as the best

The data is stored in our data base and improving ourselves as your wish

MODULE CONNECTIVITY

In this the administrator will be responsible for registering the clients at the site .the module is also responsible for provide assured events booking through online platform. In this the user can see the services that the system provided by the service module .the client has to get his /her information through online .if he /she wants to contact then they get our contact details from contact us module.

MAIN PAGE

Main page :

This is the main page of our project

Buttons :

- 1) Home
- 2) Gallery
- 3) About us
- 4) Contact us
- 5) Feedback

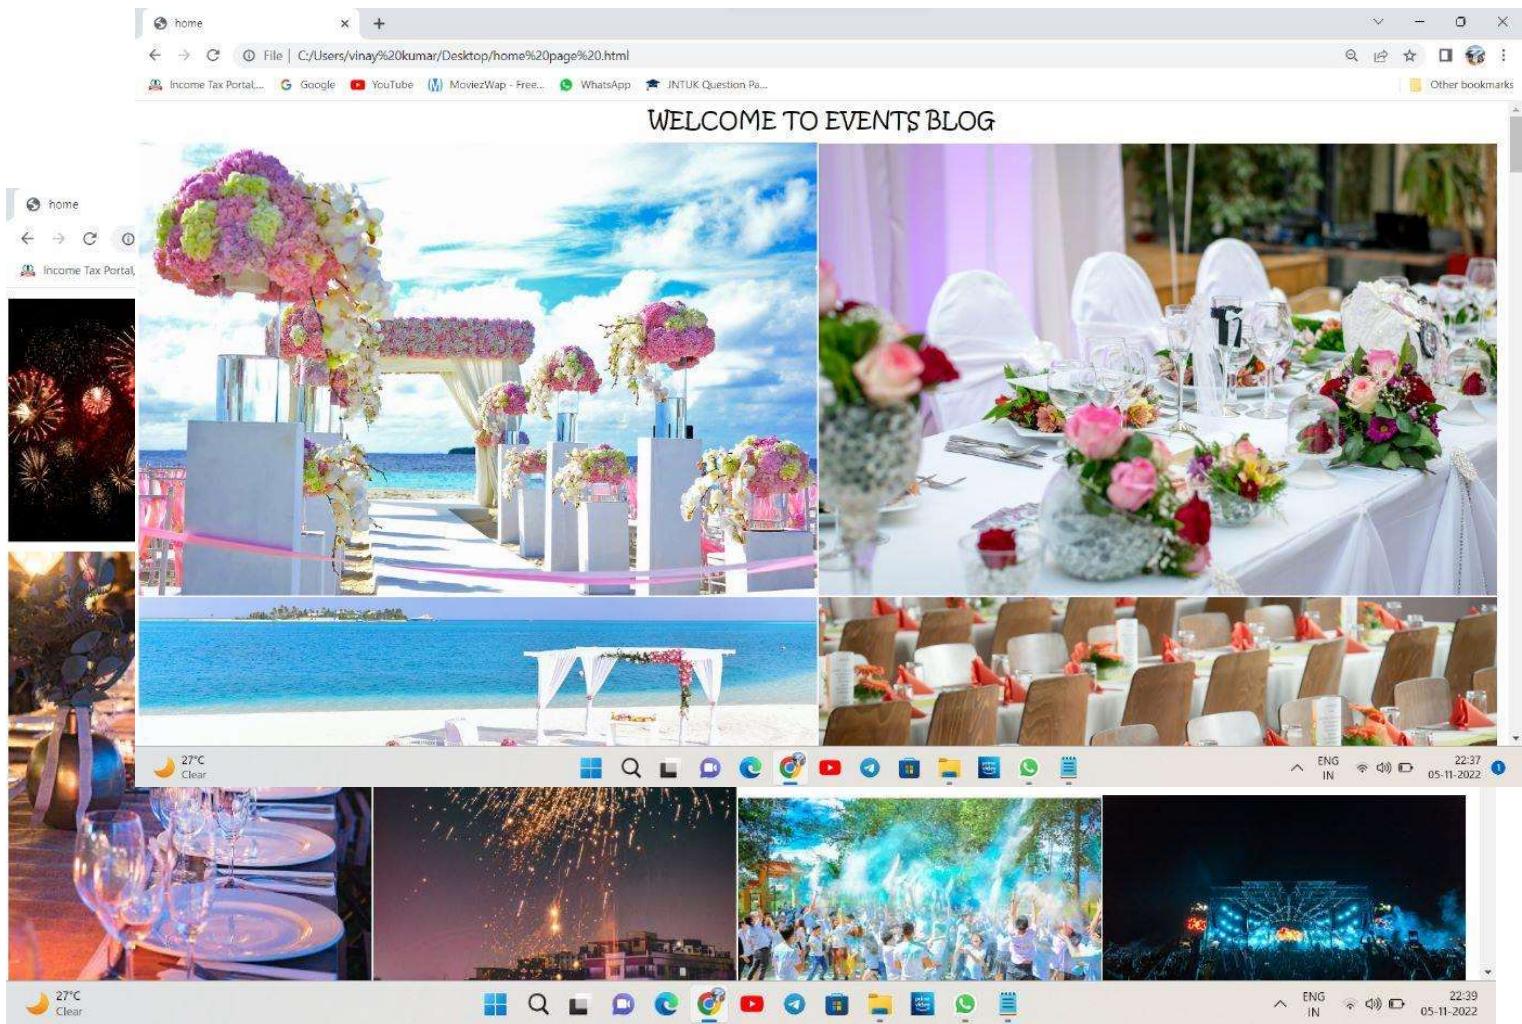

The screenshot shows a web browser window with the following details:

- Title Bar:** Downloads | GitHub Desktop | Simple collaborator | main page -
- Address Bar:** File | C:/Users/vinay%20kumar/Desktop/mainpage%20.html
- Toolbar:** Income Tax Portal... | Google | YouTube | MoviezWap - Free... | WhatsApp | JNTUK Question Pa... | Other bookmarks
- Content Area:**
 - Header:** WELCOME TO EVENTS BLOG
 - Image:** A graphic featuring a megaphone on the left and the text "UPCOMING EVENTS" in large, bold, red and blue letters on the right.
 - Navigation Bar:** HOME | GALLERY | ABOUTUS | CONTACTUS | FEEDBACK
 - System Icons:** Weather (27°C Clear), Taskbar icons (File Explorer, Search, Task View, Edge, YouTube, WhatsApp, Mail, Calendar, etc.), and system status (Battery, ENG IN, 22:33, 05-11-2022).

HOME PAGE

Gallery :

when click on the gallery button it takes us into the gallery page

ABOUT US

About us:

- When click on the about us button it takes to the information page of the events blog
- To manage the blog and for the security purposesA
- We provide our facilities to the costumers

The screenshot shows a Microsoft Edge browser window with the title bar "about us". The address bar displays the file path "File | C:/Users/vinay%20kumar/Desktop/about%20us.html". The page content is as follows:

'RAVI EVENTS'

is an honor-winning event arranging and setting firm. Our full services, all the way subtleties, and administrations make our studio the ideal beginning for everything party style.

Through imaginative structure and immaculate execution, we create paramountly and one-of-a-kind events everything being equal, sizes and styles.

For a long time our capable, experienced group has aced incalculable festivals – weddings, corporate, occasions, birthday celebrations, meals and that's only the tip of the iceberg.

'ravi events' gives key event arranging and innovative conveyance of gatherings and events for an assortment of businesses, including, innovation, pharmaceutical, non-benefit, athletic and the sky's the limit from there.

We are grant-winning industry pioneers giving complete gathering and event coordinations and inventive generation to the executives.

We offer key direction and program the board, from idea to conveyance to ROI investigation.

Regardless of whether your gathering or event is a corporate meeting, fantastic opening, acknowledgment event, or item dispatch, you can confide in our expert organizers to make your extraordinary event an important accomplishment through our uncommon event arranging administrations in North Carolina, London, and around the globe.

AEP, Academic Event Professional, is the main meeting for grounds event organizers considered and created by the Parent organization in 2005, which strengthens our capacity and maintainable projects with life span and proceeded with greatness in conveyance.

What's more, the Company name is focused on manageable practices and provider assorted variety considerations inside our merchant forms.

At the bottom of the screen, the taskbar shows the date "05-11-2022" and the time "22:40". Other icons include a weather forecast (27°C Clear), search, file explorer, edge browser, and various system icons.

CONTACT US

Contact us :

- When we click on the contact us link it goes to another page of contact list
- Here there are our executives contacts list

The screenshot shows a web browser window with multiple tabs open. The current tab displays a list of executive contacts, each with a name and a contact number. A context menu is open over the third contact entry (East Godavari), with options for 'Make a call from:' and 'Pick an app'. The browser's toolbar and status bar are visible at the bottom.

1. Anantapuram
ajay
Contact Number: [699755994596](#)

2. Chittoor
srinu
Contact Number: [699755995678](#)

3. East Godavari
sai
Contact Number: [699755999632](#)

4. Guntur
kumar
Contact Number: [699755991238](#)

5. krishna
Ravi
Contact Number: [699755991596](#)

6. kurnool
hari
Contact Number: [699755990001](#)

7. prakashan

26°C Mostly cloudy ENG IN 23:02 05-11-2022

Make a call :

- Click on the phone number to make a call
- It makes a call where the platform is either mobile or pc
- Make a call to our executive member near by your area and book the slots for making events, birthday parties, functions...

The screenshot shows a web browser window with multiple tabs open. The main content area displays a list of contact numbers for different regions:

- 1. Anantapuram:
ajay
Contact Number: [699755994596](#)
- 2. Chittoor:
srinu
Contact Number: [699755995678](#)
- 3. East Godavari:
sai
Contact Number: [699755999632](#)
- 4. Guntur:
kumar
Contact Number: [699755991238](#)
- 5. krishna:
Ravi
Contact Number: [699755991596](#)
- 6. kurnool:
hari
Contact Number: [699755990001](#)
- 7. prakashan

A context menu is displayed over the contact number for 'Anantapuram'. The menu includes:

- Make a call from:
- Pick an app
- To send a number from here to your Android phone, sign in to Chrome on both devices.

At the bottom of the screen, the taskbar shows the Windows Start button, a search bar, and several pinned application icons. The system tray indicates the date (05-11-2022), time (23:02), battery level (ENG IN), signal strength, and weather (26°C, Mostly cloudy).

FEEDBACK

Feedback:

- On click on the feedback link it takes us to the feedback page
- Review by the customers is our services are good or not

The screenshot shows a Google Forms feedback page titled "FEEDBACK". The page has a purple header bar. The main content area contains five input fields: "NAME *", "EMAIL", "MESSAGE *", and "RATE US *". Each field has a placeholder text "Your answer" and a text input box below it. The "NAME *" field includes a note "Required". The "RATE US *" field has a small icon of a speech bubble with a pen. The bottom of the screen shows a Windows taskbar with various icons and system status.

CONCLUSION

In this paper, The project “Event Management System” Has been designed and tested. Integrating features of all The software components used have developed it. With The help of growing technology the project has been Successfully implemented. Project will definitely reduce The human effort and make the task of user, customer and Administrator easier. It is efficient to use and easy to work On it. Thus keeping in mind the advantages and Applications. We are developing an Event management software which Has total management control of customer and respective Service of different events

FUTURE WORK

Manage different organizer profile that you have created For different types of events. You can also share each one Of them with your contacts on various platforms. Keep a Record for each and every attendee that shows at the Event. Search by id or scan via QR code that is sent to the Attendees when their register.
